

Gas Oil Transfer Systems (GOTS)

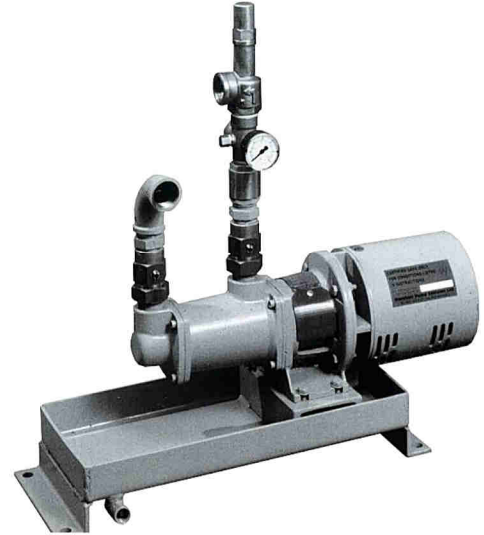

Industry: Heating Contracts
Site: All
Department: Engineering
Project: Gas Oil Transfer

Designed specifically for the delivery of light fuel oil to heating appliances, the Marshall Pumps range of Gas Oil Transfer Systems enables the heating engineer to specify a factory built packaged pump set and know they are guaranteed an adequate, reliable and trouble free supply.

Many installations over many years have resulted in Marshall Pumps being the major supplier of gas oil transfer systems to heating contractors all over the UK and abroad.

The modular design of the GOTS allows us to manufacture to client specification. Whether it be a simplex or a duplex system, have added filtration or utilise a stand alone control system, Marshall Pumps are able provide a system that caters to your requirements

At the heart of these duty specific systems are the tried and tested NOV Mono M or G range pumps. The Mono pumps have no metal to metal wearing surfaces and incorporate a helical rotary action providing a low noise level, low power consumption, freedom from vibration and a self priming ability for over tank installation if required. This said, we can also specify alternate pumps for specialist applications.

Our purpose built pressure relief valve is designed to allow for continuous or intermittent, leak free operation. This allows our systems to be utilised in dead leg or ring main heating systems alike.

For more information, please call our sales team on 0161 609 8888.

**HEATING OIL | RING MAIN | DEAD LEG
LOW NOISE | LOW MAINTENANCE | GOTS
SELF PRIMING | MODULAR | RELIABLE**
